Pr - Products Table v1.17

January 2020

General changes

Changes to the Products table are in response to user feedback and requests for new codes, including baby protection units and x-ray radiation screens. We have also worked with the Government's Department for Business, Energy and Industrial Strategy (BEIS) to include codes for equipment on the 'Energy Technology List' (ETL). Some of the changes are amendments to clarify the classification, and in some cases duplicates have been removed. In addition, we have carried out an exercise to ensure that we are consistent in our classifications, and that the classifications are in accordance with Oxford Dictionaries (published online by Oxford University Press). This has involved the amendment of classifications, without changes to the codes.

See below for details.
