Ss - Systems Table v1.17

January 2020

General changes

Several new systems have been added as a result of feedback and requests from users. We have also made some amendments to improve the quality of the codes and classifications. In addition, we have carried out an exercise to ensure that we are consistent in our classifications, and that the classifications are in accordance with Oxford Dictionaries (published online by Oxford University Press). This has involved the amendment of classifications, without changes to the codes.

See below for details.
